

FMCA Members Special Price For SoftStart - Price \$289.00

The banner features the SoftStartRV logo in the top left, which includes a lightning bolt icon and the text 'SoftStartRV™ By NetworkRV'. In the center is a photograph of the SoftStartRV device, a white rectangular box with a yellow and black power cord attached. To the right of the device is the text 'Eliminate RV A/C Power-Spike Problems and Stay Cool All the Time!'. At the bottom right are two circular icons representing the United States and Canada. The background is a gradient of red and blue.

**High-Performance
Soft Starter for All
RV Air Conditioners**

**Eliminate
RV A/C Power-Spike
Problems and Stay Cool
All the Time!**

A Softer Start For Your RV

FMCA Members Can Save Money & Electricity All In One

Reduce Startup Power Demands By Up To 70%

SoftStartRV™ temporarily reduces the load and torque in the electric current rush of the motor in start up. This reduces the mechanical stress on the motor and on the attached power cables and electrical delivery network, extending the life of the system.

It uses a soft start ramp up sequence that achieves a low start up current. SoftStartRV™ can deliver 65-70% start current decrease as compared to a compressor's LRA (locked rotor amperage).

SoftStartRV™ is the ideal solution that enables an RV air conditioner to start and run on a generator, inverter, or limited utility power when it would have otherwise not started.

How It Works?

The unit controls the inrush of current by starting the compressor motor slowly. It controls the start up voltage of the motor/compressor judiciously to effectively reduce the inrush and outpouring current while starting up. It consumes much less power from campground networks or a generator system, but still delivers full start up torque for motors and compressors.

The initial locked rotor amps (LRA) needed to start the RV A/C system can create high current surges that can unfavorably affect the operation of an overloaded power source.

In many situations, this gentler method of managing the power surge can mean the difference between using a small generator, such as a Honda EU2200i or investing

thousands of dollars in a large, heavier, back breaking generator. For RVs with a small generator and inverter, the SoftStartRV™ will also allow the choice of running an air conditioning system from an inverter. It's easy to install too, just 5 wires. Wiring diagrams, step-by-step installation guide and bonus install kit are standard.
